<u>Unlabelled</u> data is easier to source

<u>Labelling</u> data is very resource-intensive

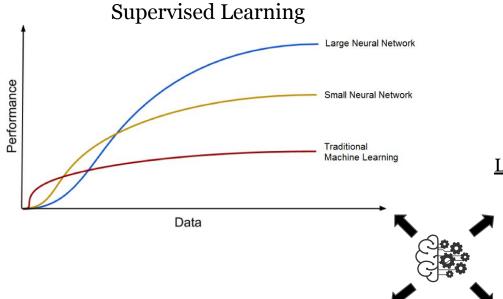

Unlabelled data is easier to source

data not collected for other purposes

Is it possible to learn from unlabelled data something useful towards our goals?

<u>Labelling</u> data is very resource-intensive

<u>Unlabelled</u> data is easier to source

Is it possible to learn from unlabelled data something useful towards our goals?

Self-Supervised Learning

Global prevalence: depression 4.4%, bipolar disorder 2.4%

Global prevalence: depression 4.4%, bipolar disorder 2.4%

Depression is the second leading cause of chronic disease burden

(Years Lived with Disability)

Global prevalence: depression 4.4%, bipolar disorder 2.4%

Depression is the second leading cause of chronic disease burden

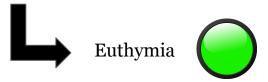

(Years Lived with Disability)

Population-level economic burden: £6.43 billion

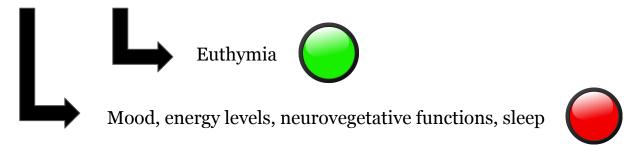

(UK-based estimate for 2018-2019)

Binary classification as the simplest yet useful scenario

## **Personal Sensing**

Mood disorders' symptoms translate into changes in physiological parameters

## **Personal Sensing**

Mood disorders' symptoms translate into changes in physiological parameters

Wearable technology and AI

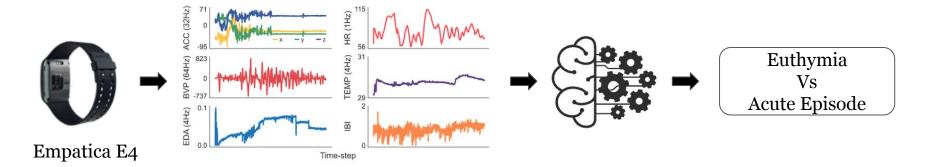

→ near-continuous, passive, ecological monitoring → early interventions

## **Personal Sensing**

Mood disorders' symptoms translate into changes in physiological parameters

Wearable technology and AI

hear-continuous, passive, ecological monitoring hearly interventions

Annotation\* is resource-intensive

Annotation\* is resource-intensive

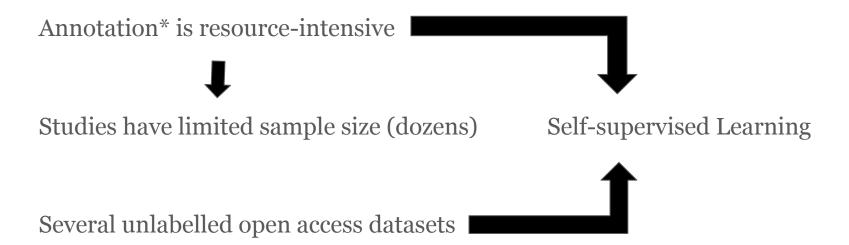

Studies have limited sample size (dozens)

Annotation\* is resource-intensive
